Turbos | Description

What are Turbos Long?

Turbos allow investors to participate on market fluctuations of the underlying. Turbos Long benefit from rising prices of the underlying. The unlimited earning potential, however, is offset by the risk of total loss if the barrier is hit. For a Turbo Short this barrier is set above the initial price of the underlying at the time of issue. There are Turbos with a certain term and turbos with an indefinite term ("open-end Turbos").

The calculation of the key figures is based on the most recently delivered price of the underlying (see date/time stamp in tab underlying).

Performance 3 years in %	+112.58%
Performance 5 years in %	+197.22%
Performance since inception in %	+1,505.00%

How do Turbos Long work?

Turbos offer an inbuilt leverage effect. The price movements of the underlying are reflected relatively independent of volatility. If the price of the underlying instrument rises, the price of the Turbo Long rises according to the chosen leverage at a disproportionate level. The leverage effect results from the lower purchase price of a Turbo compared to the direct investment in the underlying. The lower the purchase price of the Turbo, the bigger the leverage. Turbos have a strike (base) price and a barrier. The intrinsic value of the Turbo is the difference of the share price and the strike price (Turbo Long).

Secondary market

During the term it is possible to sell the product during the trading hours at the exchanges, where the product is listed.
