Bonus certificates | Description

Upon issue the bonus level is set above the initial price of the underlying. The barrier is set below the initial price. If the specific certificate comes with a cap (respectively a maximum amount), it is set at or above the bonus level.

The redemption at maturity depends on the development of the underlying. There are the following possibilities:

If the underlying does not fall to or below the barrier during the term, the investor receives at least the bonus level payment (considering the ratio). If the price of the underlying is higher than the bonus level at maturity, the higher amount is paid. The maximum amount determines the maximum payout. In case the barrier was hit during the term, the repayment depends on the performance of the underlying at maturity, but is limited by the maximum amount (if applicable). Potential losses are possible.

Secondary market

During the term it is possible to sell the product during the trading hours at the exchanges, where the product is listed.
