amount at maturity and therefore protection against possible capital losses.

- This bond is not covered by any deposit guarantee scheme. Investors are exposed to the risk that Erste Group Bank AG may not be able to meet its obligations arising from the bond in the event of insolvency or over-indebtedness or from an official order (bail-in regime). A total loss of invested capital is possible.

Guaranteed products | Description

The ERSTE Green Invest Garant 22-32 refers to the Solactive ERSTE Green Invest Index VC as underlying, has a fixed term of 10 years and will be redeemed on 31/01/2032 (maturity). During the term there is no interest payment and investors do not receive any other proceeds.

The redemption at maturity depends on the performance of the underlying. Redemption is 100 % of the nominal amount (minimum redemption amount). The participation on the positive performance of the underlying is uncapped.

Upon maturity the performance of the underlying is looked at: in case of a positive index performance investors receive this positive performance in addition to the nominal amount. In case of a negative performance, the capital protection applies and the bond is redeemed at 100 % of the nominal amount.

With the ERSTE Green Invest Garant bond investors have the opportunity to invest with just one product in sustainable companies selected according to strict environmental, social and ethical criteria and to contribute to the protection of the environment and resources.

The index that investors participate 1:1 upon maturity with this bond is the Solactive ERSTE Green Invest Index VC. Through this index and its six sustainable investment funds (ETF) of iShares investments are made worldwide in thousands of stocks and bonds that meet the strict sustainability criteria of the MSCI SRI indices.

The asset allocation of the portfolio with 60 % global equities and 40 % Euro-bonds aims to balance long-term return and expected risks as well as possible. An additional risk control manages the degree of investment between this ETF portfolio and a money market investment, with the index investing mainly in the ETF portfolio in quiet market phases. In uncertain and turbulent times the index automatically reduces the degree of investment in the ETF portfolio if its volatility rises above 7 %. This increases the money market share and the ETF portfolio is proportionately reduced, which can reduce the risk. When the market calms down, the degree of investment is increased again accordingly.

Details on the index can be found at the website of the index provider Solactive AG: <https://www.solactive.com/indices/?index=DE000SL0AA51>

Secondary market

During the term it is possible to sell the product during the trading hours at the exchanges, where the product is listed.
