+ Advantages

- Investors participate disproportionately in the performance of the underlying.
- Investors can participate in rising markets.

! Risks you should be aware of

- There is no capital guarantee and a total loss of invested capital is possible.
- If the right to buy or sell the underlying is exercised, the fees and deadlines associated with the transaction are to be considered.
- Investors bear the risk of the issuer Erste Group Bank AG.
- This warrant is not covered by any deposit guarantee scheme. Investors are exposed to the risk that Erste Group Bank AG may not be able to meet its obligations arising from

| Performance since inception in % | -72.61% |

Warrants | Description

What are call warrants?

Warrants are securities that transfer the right (but not the obligation) to the holder to buy or sell an underlying instrument (for example, a share). A call warrant gives investors the right to buy the underlying instrument at a later date at for an agreed price (i.e. the strike price). A warrant may be either exercised during the term (American style) or at the end of it (European style). Warrants may be traded on the stock exchange or over the counter.

How do call warrants work?

A call warrant gives investors the right to buy the underlying instrument at a later date for an agreed price. They will only want to exercise this right if the price of the underlying is higher than the strike price ("in the money"). This way investors could buy the underlying instrument from the issuer at the strike price and sell it on at the currently higher price on the stock exchange. If the price of the underlying is at ("at the money") or below ("out of the money") the strike price, it does not make sense to exercise the purchase right. In this case investors would lose their invested capital. In practice, instead of the actual delivery of the underlying instrument the transaction tends to be settled in cash by paying the difference between the price of the underlying on the day of exercise and the strike price.

Warrants offer investors the chance to benefit disproportionately from fluctuations in the price of the underlying. This leverage effect is due to the relatively lower capital investment for the purchase of a warrant compared to a direct investment in the underlying.

Secondary market

During the term it is possible to sell the product during the trading hours at the exchanges, where the product is listed.
