- Redemption of 100 % of the nominal amount at maturity and therefore protection against possible capital losses.

the risk of insolvency.

- This bond is not covered by any deposit guarantee scheme. Investors are exposed to the risk that Erste Group Bank AG may not be able to meet its obligations arising from the bond in the event of insolvency or over-indebtedness or from an official order (bail-in regime). A total loss of invested capital is possible.

Guaranteed products | Description

The 1.80% ERSTE Future Invest Garant 22-30 (II) is a bond issued by Erste Group Bank AG with a fixed coupon of 1.80% p.a. and a fixed term of 8 years. The underlying of the bond, the Solactive ERSTE Future Invest Index VC, invests broadly diversified in five interesting megatrends.

The redemption at maturity depends on the performance of the Solactive ERSTE Future Invest Index VC.

In case of a positive performance of the index, the investor will receive the performance of the index in addition to the nominal amount. In case of a negative performance the capital guarantee applies and investors receive 100% of the nominal amount (minimum redemption price).

With the 1.80% ERSTE Future Invest Garant bond investors have the opportunity to invest in 5 megatrends with just one product. These megatrends are:

- Health care
- Lifestyle
- Technology & innovation
- Environment & clean energy
- Emerging markets

The index that investors participate 1:1 upon maturity with this bond is the Solactive ERSTE Future Invest Index VC. It invests in 10 exchange-traded investment funds (ETFs), which passively invest in recognized financial market indices and reflect them efficiently. An additional risk control controls the degree of investment of the ETF portfolio and a money market investment. The ETF portfolio consists of 7 megatrend equity funds and 3 bond funds on sustainable corporate and emerging market bonds.

In calm market phases, the index invests mainly in the ETF portfolio. In uncertain and turbulent times, it may be advisable to make the investment more defensive and increase the money market share. Therefore, the index automatically reduces the degree of investment in the ETF portfolio as its volatility rises above 7 %. As a result, the money market share will increase and the ETF portfolio will be proportionately reduced, which can reduce the risk. The extent of the automatic switching to the money market depends on the volatility. When the market calms down, the degree of investment is increased again accordingly.

Details on the index can be found at the website of the index provider Solactive AG: <https://www.solactive.com/indices/?index=DE000SLA9H23>

Secondary market

During the term it is possible to sell the product during the trading hours at the exchanges,

where the product is listed.
